LETTER OF TRANSMITTAL

STATE OF ILLINOIS,
DEPARTMENT OF MINES AND MINERALS.

SPRINGFIELD, ILLINOIS, MAY 1, 1975

*To His Excellency, Dan Walker, Governor
State of Illinois, Springfield.*

Sir: In compliance with the Illinois Revised Statutes, I am submitting herewith the Annual Report of the Illinois Department of Mines and Minerals for the year 1974. This report includes production, employment, and casualty figures for underground and surface mines; the annual report of the Division of Land Reclamation and the annual report of the Division of Oil and Gas.

Respectfully submitted,

RUSSELL T. DAWE, *Director*

TABLE OF CONTENTS

	Page
Directors of the Department of Mines and Minerals	6
Personnel Roster	7
List of State Mine Inspectors and Counties Comprising Their Respective Districts	10

I GENERAL

Table 1—Directory of All Mines	12
Table 2—General Statement With Comparative Figures 1970-1974	15
Mines Suspending Operations During 1974	16
Mines Abandoned During 1974	16
New Mines Opened During 1974	16

II PRODUCTION

Table 3—Average Man-Day Production—All Mines	19
Table 4—Output of Shipping Mines by Months, All Mines 1969-1974 1969-1973	20
Table 5—Number of Shipping Mines Operated and Average Days Worked Each Month, All Mines 1969-1974	20
Table 6—Relative Rank of Counties Producing 500,000 Tons or More 1970-1974	20
Table 7—Tons of Coal Produced, Average Days Worked, Number of Mines Operated, and Number of Employees in All Shipping Mines, With Percentages by Years from 1920 to 1968 Inclusive, All Mines 1969-1974	21
Table 8—Mines and production 1973-1974	21
Table 9—Output of All Mines and Days Worked Each Month in 1974	22
Table 10—Disposition of Output, Explosives Used, and How Mined	26
Table 11—Railroads Handling Coal and Mines Served by Each	34
Table 12—Special Preparation Plants	37
Table 13—Physical and Mechanical Characteristics of All Mines, Tons Mined, Total Tons Mined, and Year Mine Opened	38
Table 14—Total Production of Coal in Tons by Counties, 1882-1974	42
Table 15—Summary of the Various Seams of Coal, Kind of Opening, Manner of Working and Tons Produced From Each Seam	42

III LABOR AND EMPLOYMENT

Table 16—Non-Fatal Accidents by Counties and Months, 1974	44
Table 17—Comparative Statistics of Fatal and Non-Fatal Accidents for the Period 1928 to 1974 Inclusive	51
Table 18—Tons of Coal Mined, Number Employed, Number Killed and Injured, Tons Mined to One Man Killed and Injured, and Ratios Per 1,000 Employed and Per 1,000,000 Tons Mined—1882-1974, Including Injuries Involving Loss of 30 Days or More	52
Table 19—Fatal Accidents by Occupation and Causes, 1974	55
Table 20—Causes of Fatal Accidents by Years—1882-1974	56

Table 21—Comparative Statistics of Fatal Accidents for the Period 1965-1974 Inclusive and Tons Mined to One Man Killed	57
Table 22—Fatal Accidents	58
Summary of Fatal Accidents	59
Table 23—Working Time	66
Table 24—Employees	66

IV MECHANIZATION

Table 25—Machine Mining for the Period 1928 to 1974 Inclusive, All Mines	68
Table 26—Number of Mines Operated and Total Tons Mined; Strip Mines and Output; Number of Mines Using Machines, Number Used and Tonnage Undercut; Number of Mines Using Motors for Underground Haulage, Number of Motors Used and Tons Hauled; Also the Percentage of Each Class—Shipping Mines by Years 1907-1968, All Mines 1969-1974	69
Table 27—Method of Loading in All Mines	70
Table 28—Mechanical Loading in Shipping Mines for Thirty-eight Years, 1931-1968, All Mines 1969-1974	71
Table 29—Method of Loading in Shipping Mines for Thirty-eight Years, 1931-1968, All Mines 1969-1974	72
Analytical Laboratory	73
Report of Miners' Examining Board	76
Certificates of Competency Issued by Miners' Examining Board	78
Summary of Activities of Mine Rescue Stations	90
Report of Metal Mines Operation	91
Report of Certificates of Competency Issued by Mining Board:	
State Mine Inspectors	93
Mine Rescue Station Supervisor	93
Mine Rescue Station Assistant	93
Mine Managers, First Class	94
Mine Examiners	96
Electric Hoisting Engineers	100
State Mine Inspector—Metal Mine	101
Metal Mine Foreman	101
Electric Hoisting Engineers—Metal Mine	101

DIRECTORS OF ILLINOIS — DEPARTMENT OF MINES AND MINERALS

Name	Years Served	Address	Remarks
Newsam, Richard	1898-1912	Peoria	
John, Evan D.	1917-1919	Spaulding	
Thompson, Joseph C.	1919-1920	Johnston City	
Medill, Robert M.	1920-1924	Roanoke	
Bolt, Martin	1924-1926	Springfield	
Lewis, A. D.	1926-1934	Springfield	
Millhouse, John G.	1926-1930	Litchfield	
McSherry, James	1930-1934	DuQuoin	
Medill, Robert M.	1941-1947	Roanoke	
Walker, Harold L.	April 2 to October 1, 1947	Urbana	
Moses, Thomas	October 1, 1947 to February 20, 1948	Danville	Died in office.
Cruse, Robert R.	March 1, 1948 to January 16, 1949	Dowell	
Starks, James W.	January 17, 1949 to February 3, 1949	Taylorville	Died in office.
Walker, Harold L.	February 8 to April 18, 1949	Urbana	
Eadie, Walter	April 19, 1949 to January 15, 1953	West Frankfort	
Schull, B. H.	January 15, 1953 to August 31, 1961	Marion	
Orlandi, W. J.	September 1, 1961 to February 14, 1963	Kincaid	
Ruff, L. Leon	February 15, 1963 to February 14, 1970	Collinsville	
Gulley, David L.	February 15, 1970 to December 31, 1971	Coello	
*McReaken, C. Dayton	January 1, 1972 to February 8, 1973	West Frankfort	
Dawe, Russel T.	February 9, 1973	Valier	

*Acting Director

 62530

**EXPLOSIVE INSPECTION AND
MINE TRAINING SERVICE
BENTON, ILLINOIS**

ADMINISTRATOR: Donald Simpson, R.R. 2, Benton, Illinois
62812

INSPECTOR: James R. Storey, R.R. 1, Sesser, Illinois 62884

INSPECTOR: Lester W. Glynn, 58 Second St., La Salle, Illinois
61301

INSPECTOR: Robert Anderson, 2917 Dale, Granite City, Illinois
62040

INSTRUCTORS: Russell Spitzner, 1201 N. Garfield, Marion, Illi-
nois 62959

Theodore A. Plumlee, R.R. 3, West Frankfort,
Illinois 62896

**LIST OF STATE MINE INSPECTORS AND
COUNTIES COMPRISING THEIR
RESPECTIVE DISTRICTS**

JOHN HAMMOND, Box 109, Rushville, Illinois 62681, Fulton, Knox, Mercer, Peoria, and Jo Daviess.

ALEXANDER JOHNSON, 651 East Main Street, Box 896, Cuba, Illinois 61427, Fulton, Peoria, Stark and Kankakee.

CHARLES RENSHAW, 701 South 29th Street, Mt. Vernon, Illinois 62864, Jefferson and Perry.

JOE GLADSON, P.O. Box 187, Raymond, Illinois 62560, Christian and Macoupin.

THOMAS PINNELL, Box 73, Farmersville, Illinois 62533, Douglas, Montgomery, and Vermilion.

MARTIN BARBER, P.O. Box 94, Johnston City, Illinois 62951 Perry, and Williamson.

GEORGE T. WILLIAMS, 702 West Jones Street, West Frankfort, Illinois 62896, Franklin, and Williamson.

EDMUND GREZLAK, 207 South Main Street, Zeigler, Illinois 62999, Franklin, Perry, and Randolph.

ARTHUR JOE WILLIAMS, 715 Susan Esther, Benton, Illinois 62812, Perry, Randolph, and Wabash.

BYRD RICH, 631 South Day, West Frankfort, Illinois 62896, Franklin, and Williamson.

ROBERT PATE, 1 Lexington Manor, Harrisburg, Illinois 62946, Saline.

JOHN MORTHLAND, *State-Inspector-At-Large*, 720 North Hughs Street, West Frankfort, Illinois 62896, Jefferson and Wabash.

ROBERT JONES, 617 North Madison, Benton, Illinois 62812, Jefferson and Perry.

WILBUR FRANKLIN, P.O. Box 121, Tilden, Illinois 62292, Randolph, and St. Clair.

JAMES KOLISEK, 410 Bond Street, Benton, Illinois 62812, Johnson, Saline, and Williamson.

BURNETT BAILEY, Coulterville, Illinois 62237, Gallatin.

ARNOLD BLACK, *Metal Mine Inspector*, R.F.D. 4, Elizabethtown, Illinois, Hardin, Pope, and Alexander.

I *General*

I GENERAL—TABLE 2 GENERAL STATEMENT WITH COMPARATIVE FIGURES— 1970 - 1974

	1974	1973	1972	1971	1970
COUNTIES AND MINES					
Number of counties producing coal	21	22	22	22	22
Number of mines operated	55	56	59	63	64
Number of underground mines	23	24	26	27	29
Number of strip mines	32	32	33	36	35
OUTPUT OF TONS					
All mines	58,072,640	61,548,670	65,521,394	58,415,239	64,884,103
Underground mines	31,104,112	32,577,353	31,715,795	29,453,926	31,615,570
Strip mines	26,968,528	28,971,317	33,805,599	28,961,313	33,268,533
DISPOSITION					
Tons handled by railroads	47,618,180	51,291,010	49,079,672	44,654,620	47,398,725
Tons loaded on barge for shipment	2,231,921	2,169,781	5,963,238	5,018,108	8,103,490
Tons disposed of otherwise	8,222,539	8,087,879	10,478,484	8,742,511	9,381,888
EMPLOYEES					
Underground mines	8,718	7,794	7,870	7,088	6,785
Strip mines	3,749	3,615	3,367	3,483	3,429
All mines	12,467	11,409	11,237	10,571	10,214
AVERAGE DAYS WORKED					
Underground mines	217	211	222	215	216
Strip mines	191	197	216	161	198
All mines	202	203	219	184	206
MINING METHOD					
Number of mining machines in use	36	35	36	44	53
Tons mined by machine	31,104,112	32,577,353	31,715,795	29,453,926	31,615,570
Tons mined by stripping	26,968,528	28,971,317	33,805,599	28,961,313	33,268,533
LOADING					
Number of mechanical loaders in use	35	31	41	44	63
Continuous mining machines in use	133	133	118	115	96
Tons loaded mechanically	31,104,112	32,577,353	31,715,795	29,453,926	31,612,749
Tons loaded by hand					2,821
EXPLOSIVES					
Pounds of explosives used for blasting overburden	45,414,647	85,691,327	68,753,332	54,132,574	69,023,993
Pounds of pellet powder used	119,650		994,165	40,000	40,000
Pounds of dynamite used	9,230,510	1,760,640	468,834	707,512	564,040
Pounds (* permissible used	21,454,270	69,339	127,690	169,953	934,413
HAULAGE					
Number of motors used in underground haulage	104	97	79	89	49
CASUALTY					
Number of fatal accidents	12	6	11	15	15
Number of non-fatal accidents	465	488	607	535	618
Tons mined to one man killed	4,839,387	10,258,111	5,956,490	3,894,349	4,325,607
Tons mined to one man injured	124,887	126,124	107,943	109,187	104,990
Number employed to one man killed	1,039	1,902	1,022	704	681
Number employed to one man injured	27	23	19	20	17
MISCELLANEOUS					
Number of mines using closed lights	23	24	26	27	29
Number of mines using compressed air machines	11	11	13	15	13
Number of mines using continuous miners	17	17	22	19	19

MINES SUSPENDING OPERATIONS DURING 1974 SHOWING MONTH OF LAST OPERATION

Mine Index No.	Operator	County	Month of Last Operation
L-12	E & L Coal Company #2	Johnson	December
L-260	Hazel Dell Coal Company Pit #1	Fulton	November
L-220	V-Day Coal Company	Vermilion	November
L-63	Viola Materials, Inc.	Mercer	May - 1973

MINES ABANDONED DURING 1974 SHOWING MONTH OF LAST OPERATION

Mine Index No.	Operator	County	Month of Last Operation
S-2	Peabody Coal Company Eagle #1, U. G.	Gallatin	March
S-1	Peabody Coal Company Northern Illinois Mine #14E	Kankakee	September
L-164	United Electric Coal Co. #27, Banner Mine	Peoria	February

NEW MINES OPENED—1974

Mine Index No.	Operator	County	Month Mine Opened
S-9	Consolidation Coal Company Burning Star #5	Jackson	November
L-257	E & B Coal Company	Williamson	March
S-20	Freeman Coal Mining Company Crown #2	Macoupin	July
S-1	Inland Steel Company #2	Hamilton	December
S-4	Monterey Coal Company #2	Clinton	August

SUMMARY OF FATAL ACCIDENTS 1974

Mr. Ralph Spangler, age 48, married, 5 dependents, came to his death at about the hour of 5:15 p.m. on March 26, 1974, from electrical shock while in the performance of his duties as Electrician at Peabody Coal Company, Northern Illinois Mine, South Wilmington, Kankakee County, Illinois.

Mr. Spangler had gone to the sub-station to make some tests concerning a loss of power. He was accompanied by Foreman John Lamoreaes. However, the foreman left before the tests were completed. When Mr. Spangler notified the foreman that he had located the ground fault at the sub-station, it was approximately 5:00 p.m. At this time Mr. Spangler had been working in the portion of the sub-station where knife switch pulls are located and his ohm meter was connected for continuity, but he did not have complete knowledge of the ground fault. Apparently at this time he decided to take the cover off the back side of the oil switch, which was open and the power was off from the oil switch to the pull knife switch. The potential transformer was energized with the oil switch open. There were no witnesses with the man at this time. He was apparently trying to determine the extent of the ground fault, which we found during our inspection, in the steel sheet partition separating the oil switch from the knife switch pulls where the phases left the oil switch and went to the knife switch. The primary disconnects for the sub-station, carrying 33,000 volts are located 2400 feet from the sub-station. The secondary oil switch is located at the sub-station at 4,160 volts. Inside where Mr. Spangler was working, showed evidence of poorly constructed work, which was indicated by the method of which the cables passed through this sheet of steel, where the opening was made with a cutting torch when the ground fault was located, no protective collar was installed. Another place, the truck line from the sub-station to the field switch houses, had a similar situation. There was evidence on another phase where the same conditions apparently had happened before. The potential transformers are approximately thirty inches from the bottom of the sub-station. While working with the leads with his left hand, Mr. Spangler had made bodily contact with his left hip and thigh in the 4,160 volts, which burned the left side of his body, a portion of his left arm and hand. His left ear lobe, neck and face appeared to have a flash burn, according to the coroner. Another possibility, after making contact with the power source, some of these flash burns may have been caused after power going through his body killed Mr. Spangler. Other parts of his body which were burned, could have touched a potential transformer. Mr. Spangler fell to the

ground, face up. His left hand, which had no power glove on it, was under a portion of the transformer. His right hand had a glove on it, his left foot was under the calf of his right leg. Mouth to mouth resuscitation was administered by the foreman, Mr. John Lamoreaes, without revival. Mr. Spangler was pronounced dead at the site by James Patterson, Deputy Coroner.

Mr. Thomas L. Robertson, age 25, married, one dependent, came to his death at about the hour of 5:10 a.m., May 14, 1974, from being struck in the chest by a metal rim off a roof bolting machine, while in the performance of his duties as Repairman at the Peabody Coal Company, Eagle #2 Mine, Shawneetown, Gallatin County, Illinois.

Mr. Robertson was using an oxygen and acetylene torch to cut the lug bolts off that held the wheel on the bolting machine, which also holds the wheel together when they are in contact. All ten lug bolts had been cut out and the air pressure of the tire forced the metal wheel apart. Mr. Robertson was struck in the chest by a metal split rim off a roof bolting machine. The two parts of the wheel were held together by five bolts, 2-1/2 inches by 5/8 inches. However, the investigation showed that two of the five bolts were broken and one had the threads damaged to the extent that it was not holding, while the lug bolts were intact they also held the wheel together. The heat generated by the cutting torch added to the air pressure, causing it to erupt more violently. The pressure was so great on the two bolts that were holding the wheel together, they were completely stripped out.

Mr. Orion H. Hargett, age 42, married, 2 dependent children, came to his death at 3:27 p.m., May 19, 1974, from injuries received in a fall, while in the performance of his duties as Tractor Operator at the Peabody Coal Company, Northern Illinois Mine, South Wilmington, Kankee County, Illinois, May 14, 1974.

Mr. Hargett was injured on May 14, 1974 at 10:30 p.m. he was working with the pumper, Mr. Fred Lestina, they were pulling pump hoses across the high wall bench. Mr. Hargett was backing the 730 Case Tractor from the bench road toward the high wall to hook up to a piece of hose. Mr. Lestina was standing back of the tractor to hook it up. He yelled that the tractor was far enough. However, Mr. Hargett said he could not stop. Mr. Lestina yelled for him to get out and Mr. Hargett said he could not. The tractor was in low range reverse position and continued over the high wall,

falling 70 feet and landing in the pit in mud and water, approximately three feet deep. Mr. Hargett landed about four feet to the right of the tractor in a sitting position with mud and water up to his arm pits. Mr. Lestina went immediately for assistance. Mr. John Lamoreaes, (Foreman) and Mr. Allen Gilmore responded at once, they lifted Mr. Hargett from the mud and water and with other assistance, they carried him to a stretcher on the incline where the Braidwood Ambulance and Rescue Squad were waiting. They took Mr. Hargett to the hospital. Allen Gilmore, a Safety Committeeman made the trip to the hospital with Mr. Hargett and stated that he was conscious all the way to the hospital. Mr. Hargett sustained a concussion on the back of the head, fragments of skull in the brain, a concussion over the left eye, seven broken ribs and the left arm broken at the elbow. Mr. Hargett passed away at 3:27 p.m., May 19, 1974 at St. Joseph's Hospital, Joliet, Illinois.

Mr. Billy J. Davis, age 52, married, came to his death on June 4, 1974 at 3:00 p.m., from injuries received at 12:15 p.m., May 14, 1974, while in the performance of his duties as Laborer at the Sahara Coal Company, Mine No. 20, Harrisburg, Saline County, Illinois.

Mr. Billy J. Davis was in the West Section of the Sahara Mine No. 20, where he was helping to complete a move-up, he and Virgil Stilley were pulling the roof-bolter cable up to the power center. In the process of pulling the cable with a jeep, it became tight. They decided to go back and get another loop and in doing so Mr. Davis was feeding the cable across his body when the right front wheel ran upon the loose end of the cable pulling it tight across Mr. Davis' body, pressing him into the back panel of the jeep, injuring him internally. Virgil Stilley did not know that Billy Davis got caught in the cable until he heard Bill shout "Hold It". Mr. Stilley was turning the jeep through a crosscut at the time, he backed the jeep up and got Billy out of the cable and laid him on the ground. He then went to get Jim Dudley, the Face Foreman, who immediately sent some men to get the stretcher and go assist Virgil Stilley with Mr. Davis. Mr. Dudley called the top and told them he had a man hurt and ordered an ambulance, which was waiting on top. Mr. Davis said he thought he could walk but was not allowed to. He was taken to Doctors Hospital in Harrisburg, where he was examined by Dr. Sloan. Dr. Sloan could find nothing wrong with Mr. Stilley and immediately transferred him by ambulance to the Welborn Hospital in Evansville, Indiana, where he was operated on for a split Esophagus. Mr. Davis died of his injuries on June 4, 1974 at 3:00 p.m.

Mr. Charles Courter, age 23, married, came to his death at about the hour of 7:15 p.m., from crushing injuries, while in the performance of his duties as Roof Bolter at the Peabody Coal Company, River King #1 Underground Mine, St. Clair County, Illinois, August 7, 1974.

Mr. Courter was working with his father Melvin Courter as a Roof Bolter, developing the Main South Entries. The #3 Main South Entry had a slip running down the middle of the entry, due to this slip the crosscut was driven through to the boundary ahead of the #3 Main South Entry and ahead of air. A decision was made to set the entry over 6' with and attempt to put the slip in the rib line as the entry developed. By setting the entry over to the right, this left a notch at the intersection. Charles Courter did bolt the intersection, but the face was not bolted when the crosscut was driven, and the same location (being the notch) was not bolted when the #3 entry was driven through, creating a notch 10' wide and 9' deep. Mr. Joe Blus (Foreman) came back after two shifts and drove 16' in the #3 Entry. Melvin Courter put two bolts at the right rib line. Charles Courter was attempting to drill on the left when rock fell from the slip, starting at the face and catching Charles Courter at the notch, crushing him to death.

Mr. Douglas Murphy, age 59, married, came to his death at about the hour of 12:30 p.m., September 6, 1974, while in the performance of his duties as Laborer at the Sahara Coal Company, Sahara #21, Mine, Harrisburg, Saline County, Illinois.

Mr. Murphy was pulling a cable beneath the 1st East Head off the North Belt when he became entangled in the return roller, just before the threading mechanism. His right arm and shoulder were pulled between the belt and the roller up to his neck and side. Mr. Murphy was in the belt while it was running, approximately two minutes. Mr. Emery who was working with Mr. Murphy, shut the belt off at once and called for help from the bottom. The Mine Manager, Mr. Harold Hancock, and Mr. J. C. Barger, Chief Electrician, arrived at the Belt Head in approximately five minutes. They cut the belt and removed Mr. Murphy, he was breathing but was unconscious at this time. He was immediately transported to the top where he was taken by ambulance to Doctors Hospital in Harrisburg, Illinois. Mr. Murphy expired at approximately 12:30 p.m., on September 6, 1974.

Mr. Lawrence Lavern Edwards, age 37, married with six dependent children, came to his death at the hour of 5:55 a.m., September 11, 1974, from crushing injuries to the heart and chest structures, while in the performance of his duties as Roof Bolter at the Zeigler Coal Company, Mine #4, Johnston City, Williamson County, Illinois.

Mr. Edwards was working as a Roof Bolter, developing the Main East Entries. Mr. Kenneth Loyd was working with Mr. Edwards on a Manson Double Boom Roof Bolter, Roof bolting the #2 Main East Entry. Mr. Ernest Clendenin (Cutting Machine Helper) was making up bolts at the time of the accident and was sitting on the seat of the Bolter. Mr. Edwards was putting up his last bolt (they were using 5' bolts and the hole was drilled 3' deep.) Mr. Edwards turned around and walked back to get the bolt that was made by Mr. Clendenin, he picked up the bolt, turned around to walk back to the controls, got to the fender of the Roof Bolter when the 8' x 3' x 30" roof portion fell, crushing Mr. Edwards against the Bolter, severely crushing the heart and chest structures.

Mr. Harry Owsley, age 48, married, came to his death at about the hour of 5:05 a.m., from electric shock, while in the performance of his duties as Machine Operator at the Old Ben Coal Corporation, Mine #26, Benton, Franklin County, Illinois on September 16, 1974.

The fatal accident occurred in the 250' 60 degree crosscut between 1 and 2 bleeders off 48 (A) North off First East South. Mr. Owsley had loaded one-half shuttle of coal when power was lost on the shuttle car. During that time Carl Sims had gone to the transformer to engage switch, Mr. Owsley left the machine and walked back out by the shuttle car where the helper, Roy Edward Schafer, Classified Roof Bolter was standing. Carl Sims walked back to the shuttle car after engaging power and discovered the shuttle car was grounded by the shock received by contacting the light guard with the back of his hand. He stated then that the shuttle car was hot and he was going to the transformer to disengage the power. While he was enroute to the transformer, Harry Owsley walked toward the machine and contacted the front of the shuttle car with his left hand. Roy Schafer stated that he heard a noise like a groan and turned around in time to see Mr. Owsley's body fall down between the shuttle car and machine, with his left arm sliding down the frame of

the shuttle car. He then yelled to Carl Sims who was about half-way out to the Section Foreman, Darrell Mitchell, who was at the Power Station, to knock the power off. As soon as the power was off, Roy immediately went to Mr. Owsley and pulled him out, while others were bringing stretchers to the scene of the accident. Mr. Owsley's body was brought to the surface at 5:35 a.m., where an ambulance was waiting, at which time Mr. Owsley was pronounced dead.

Mr. Russell Charles Jokisch, age 45, married, came to his death at 6:01 a.m., October 21, 1974, from an explosion of a Haulage Truck tire, while in the performance of his duties as Welder at the Southwestern Coal Corporation, Captain Mine, Percy, Perry County, Illinois.

Mr. Jokisch was in the process of repairing a crack in the rim of a Kress Haulage Truck at the Captain Strip Mine, the size of the tire was 98x28x51. The tire was checked for pressure at approximately 1:00 a.m., the day of the accident, and was reported to have 40 pounds of pressure at that time. Mr. Jokisch airarked out an area 1 inch wide and about 6 inches in length and had begun to weld this area back when an explosion from within the tire occurred, killing him instantly. The force of the explosion was so violent that it blew insulation off the top of the shop area, broke out windows in the shop and in another truck sitting approximately 20 feet away, plus windows of the truck involved. The explosion broke the heads of the tire and the tire came off the rim on the side where Mr. Jokisch had been working.

Mr. William Brian Auten, age 20, single, and Mr. Eugene Richardson, age 33, married, four dependent children, came to their death at approximately 5:20 a.m., October 22, 1974, from crushing injuries caused by a roof fall, while in the performance of their duties as Miner Operators at the Old Ben Coal Company, Mine #21, Sesser, Franklin County, Illinois.

Mr. Auten and Mr. Richardson had been working for Frank Wehmeyer, Section Foreman and J. W. Merrell, Mine Manager, when they were trapped under a roof fall on 10CM-5 Section. The roof fall occurred in the 146 Lift Room 34 off 4A South Entry. Support was installed to help control the roof, additional roof control props and crib material were brought into the section, should they be necessary. With systematic workmanship by all concerned the body of Eugene Richardson was discovered at approximately 8:50 a.m., he

was put on a stretcher at 9:00 a.m., and at that time pronounced dead by the Doctor who was waiting underground. At approximately 10:15 a.m. Mr. Auten's body was discovered, he was pronounced dead by the Doctor at 10:20 a.m.

Mr. Mark E. Reynolds, age 20, single, came to his death by being pinned between the two frames of a Bobcat Loader Bucket, at approximately 10:15 a.m., while in the performance of his duties as Bottom Laborer at the Old Ben Coal Corporation, Mine #26, Benton, Franklin County, Illinois, October 22, 1974.

Robert Hitt, Shift Mine Manager sent Carlo Arnone and Mark Reynolds, Classified Bottom Laborers to M-7 Section, located in the 13th North off the First East North. After arriving on the Section, they moved the Bobcat Loader on power to the Utility Jeep that was to be used to transport the Bobcat. After raising the bucket, the power de-energized and the Belt Hanger Chain was then connected in the center of both vehicles for towing, and manilla rope was connected on both sides for stability. After making connection, Mark Reynolds climbed into the cab of the Bobcat and Carlo Arnone operated the Utility Jeep, pulling the Bobcat 600 feet. When arriving at the intersection of the 13th North, Carlo attempted to turn the jeep left into the First East North Entry, at which time the tow chain snapped. Mr. Arnone put the jeep under the bucket and then blocked the Bobcat with a roof bolt block and the jeep with a lump of coal. Mr. Reynolds decided to get in the cab of the Bobcat Loader to connect the chain, he laid face down in the floor of the Bobcat and had the upper part of his body between the frame and the cross frame of the bucket. Arnone stated that the jeep or Bobcat moved and the bucket lowered, pinning Reynolds between the two frames. Mr. Arnone tried to lift the bucket physically but could not release Mr. Reynolds, he then ran back in on M-7 Section to get help. David Rone and Darrell Kerley ran back out with Arnone to the Bobcat and David lifted the bucket, trying to keep the pressure off Reynolds. When other help arrived, they physically raised the bucket enough to pull Mr. Reynolds down through the front of the loader. Mark Reynolds was then put on a stretcher and brought to the surface, where an ambulance was waiting to take him to the Franklin Hospital in Benton, Illinois, where Mr. Reynolds was pronounced dead by Dr. James Durham.

ANALYTICAL LABORATORY

The Department of Mines and Minerals Analytical Laboratory was established in 1948 by the State Legislature.

The investigation of the Centralia, Illinois mine disaster which claimed the lives of 111 miners in the spring of 1948 established the fact that Illinois needed an Analytical Laboratory for the health and safety of coal miners.

The Analytical Laboratory of the Department of Mines and Minerals consists of two divisions: Safety and Coal Analysis.

Safety Division

The purpose of this division is to analyze atmosphere samples for oxygen, explosive and noxious gases to comply with the Coal Mining Act. Mine dust samples are analyzed for the percentages of combustible and incombustible materials to determine flame propagating characteristics. Atmosphere samples are collected from coal, spar, metal mines and quarries in the State of Illinois, thus ascertaining compliance with State mining laws in regard to health and safety conditions.

In case of a mine fire, the personnel of the Analytical Laboratory work directly at the site of the fire, analyzing the explosive characteristics of samples taken from the sealed areas. The analysis of these samples determine the course of action to be taken. After the fire has been extinguished, samples are taken to determine when it is safe to re-enter the sealed area.

Coal Analysis

The coal analysis program was designed to insure the quality of coal purchased for State institutions by the State of Illinois. The program was planned by the State Purchasing Department and the Director of the Department of Mines and Minerals.

The plan is for frequent unscheduled visits to all State mental, charitable, penal institutions and state universities using coal. Samples are collected by Coal Quality Inspectors.

Within an average month, numerous samples of coal are collected by the Coal Quality Inspectors, pulverized and delivered to the Analytical Laboratory, where they are analyzed. If delivered coal does not meet contract specifications, the state may level penalties as provided in the contract.

As a result of this program, General Services Purchasing Division is able to procure better grades of coal for less money. In addition, an estimated 20% efficiency was realized in heating the various state institutions.

Early in 1970, a new Mine Rescue Station and Analytical Laboratory Building at 503 East Main Street, Benton, Illinois was completed. The modern one-story building, covering 13,372 square feet, houses the latest of mine rescue and laboratory equipment. This is the first permanent building for the laboratory since its establishment in 1948.

**GENERAL DESCRIPTION
TRAINING DIVISION
DEPARTMENT OF MINES & MINERALS**

The Department, in 1971, established the Safety Training Division to provide instruction for miners in the safety aspect of coal mining and to implement any new training objectives that might be desirable and feasible. The Division consists of three full time state mine inspectors, one secretary and a training coordinator. The section staff is supplemented from time to time with an explosive inspector and a fourth state mine inspector to provide explosive and electrical safety instruction, respectively. Instruction is offered at 10 to 12 different locations throughout the state, normally at state or public offices; however, in some instances it is offered at a central coal mine site.

Although the training is available to all coal miners, the instruction is attended primarily by those personnel desiring to obtain certificates of competency as mine examiner, mine manager, hoisting engineer and state mine inspector. Certification is required by law (Chapter 93, Illinois Revised Statutes) for those personnel holding such positions.

The instruction offered deals with first aid, mine rescue techniques, accident prevention, state and federal mining laws, ventilation, roof and rib control, electricity, safety instrumentation, etc. Upon conclusion of the course, which is held twice annually, the Department (including the Mining Board) administers examinations, both oral and written, to those personnel desiring certificates. The site for such examinations is usually at the West Frankfort Armory.

Under authority of the Federal Coal Mine Health and Safety Act of 1969 the Bureau of Mines (now referred to as MESA in regards to regulation enforcement) established mandatory safety standards for the mining industry. In conjunction with these standards certain mine training requirements were established. Since state and federal objectives were practically the same the Department applied for federal grant in April of 1971. Grant approval was obtained and the first remuneration was received in April of 1972 based on the federal government returning 80% of the funds expended. The grant program has been extended from time to time. Progress reports, fund accounting etc. are a part of the Division's function.

The Department also issues certificates of competency for metal mine foreman, metal mine hoisting engineer and state metal mine inspector. Examinations are also given to establish the proficiency of mine rescue station superintendents and their assistants. These functions all require certain section duties.

Explosive Division

EXPLOSIVES DIVISION

The Department of Mines and Minerals Explosives Division was established in July 1971 as a result of the State Legislature passing Senate Bill No. 44, known as the Explosives Licensing Act of 1971. The Division is charged with statewide enforcement of the Explosives Licensing Act as well as an Act approved July 12, 1939 regulating the manufacture, possession, storage, transportation, use, sale and gift of explosives. Headquarters for this section was established in the Mine Rescue Station and Analytical Laboratory Building at 503 East Main Street, Benton, Illinois. With the advent of the Explosives Licensing Act, the Division began issuing explosive licenses to individuals who wish to use explosives. Administrative procedures include an applicant interview and examination. The Department of Law Enforcement investigates background of all individuals to determine potential criminal history. Approximately 90 new licenses and 269 renewal licenses were issued in 1974. These figures compare with 97 new and 195 renewals issued in 1973, and 223 new and 15 renewals issued in 1971 and 1972.

The Division directs and participates in investigations and advisory functions concerning the legal use of explosives, especially when complaints are made against explosive users. Investigations include advising both the plaintiff and the accused of their rights, obligations and making suggestions of alterations for appeasement of further pursuit of the matter.

Two explosive inspectors and an explosive inspector supervisor constitute the field personnel of the Division. Their duties include periodic inspection of approximately 850 explosive storage magazines located throughout the state to determine compliance with the law. In addition inspections are made of explosive books, records and files to determine compliance with the law. Inspection of manufacturing plants where blasting agents are prepared is a part of the inspection work.

An explosives safety training class was begun in June 1974 with instruction being furnished by personnel from this section. Funding assistance from MESA, in conjunction with other reimbursable training expenses was provided.

ABSTRACT

During 1974, surface mining land reclamation activities in Illinois were highlighted by a few noteworthy activities; however, in general, the year was more routine than it was eventful. The state legislature approved an amended version of the existing Surface-Mined Land Conservation and Reclamation Act and also approved an Abandoned Mined Lands Reclamation Act.

The Division of Land Reclamation financed a survey of "Problem Sites Surface-Mined Lands in Illinois" which a report was published, in 1974, by the Southern Illinois University Cooperative Wildlife Research Laboratory.

Tabulation of statistical data has undergone some minor, yet important metamorphosis. For the first time, base data for statewide coal industry surface mining statistics will reflect data originating from Southern Illinois University surveys which also were funded by the Division of Land Reclamation.

The state Supreme Court rendered a "landmark" decision involving surface mining land reclamation in Illinois. Land reclamation of properties for which bonds were forfeited experienced a big spark of activity during the year.

Labor dispute in the coal industry idled surface mining coal production during the winter and land reclamation work also was halted for nearly two months. A small ripple of activity was experienced in new small coal surface mine operations at the end of the year and continued in early 1975.

Sending out letters of non-compliance was a common occurrence this year. Energy shortage had no observable effect on land reclamation accomplishment.

A federal surface mining act for coal surface mines was passed by Congress; however, because of presidential veto, there still is no federal land reclamation law.

The Division is working on plans to alter some field district boundaries by adding a new district and effectuating more intensive law administration coverage in the field.

Readers of this report who may wish to use statistical tables to make comparisons with similar tables in previous annual reports are advised that identity numbers and table titles have been changed for some tables. Some changes were unavoidable and others were deemed advisable in the interest of conciseness and clarity.

Only "token" acreage has yet been completely reclaimed and approved for bond release, under the Surface-Mined Land Conservation and Reclamation Act (SMLC&RA) of 1971. There is only 9% of the acreage affected under the Open Cut Land Reclamation Act

(OCLRA) and Surface-Mined Land Reclamation Act (SMLRA) (1962 and 1968 laws) yet remaining to be submitted for bond release.

In 1974, acreage affected by surface mining approximately equaled the acreage for which reclamation bond release was approved. The trend of decreased annual acreage affected by coal surface mining, which began in 1969, continued the gradual decrease in 1974.

Economic conditions affecting the construction industry has reflected itself in reduced aggregate mining, to some degree.

ADMINISTRATION OF ILLINOIS SURFACE MINING LAWS

Illinois has three surface mining land reclamation laws. The Open-Cut Land Reclamation Act (OCLRA) became effective in 1962. In 1968, the Surface-Mined Land Reclamation Act (SMLRA) began. The Surface-Mined Land Conservation and Reclamation Act (SMLC&RA) started in 1971.

Readers of this report are urged to recognize that surface mining laws are not in any way retroactive. Mining disturbance initiated under a given law continues to be guided by those same criteria until final surety bond release comes about. For example, there are still some surety bonds being held, in 1974, against lands affected prior to 1968. Standards to be used in releasing those surety bonds, of course, would be those imposed by the OCLRA of 1962.

It is not unusual for questions to be asked and for news stories appearing about certain lands not being adequately reclaimed, especially in view of Illinois having on the books "modern" reclamation laws. Some implication, of course, would be that some question exists as to proper reclamation law enforcement. In reality, it just happens to be so that the state administrator cannot impose on an operator any measures not specifically called for in the appropriate law. Invariably, all questions that come up are properly and routinely answered.

Administration of surface mining laws is a complex matter and, apparently, complexity is unavoidable. A thoughtful person once observed "for every complex problem, there is an answer: simple, neat - and wrong!" On the presumption that any question has a correct answer, interested citizens and citizen groups should not hesitate to direct any question about land reclamation to the Illinois Land Reclamation Division or its field personnel listed on Page 2 of this report. Inquiries also may be made through the various offices of the Governor, if access to such offices are more convenient.

The Surface-Mined Land Reclamation Division had 210 mine locations under inspection as of December, 1974. This number decreased by nine during the year; however, the comparable figure for 1973 was 212 (Table I). The number of companies under inspection remained the same as the previous year (148).

As for active mine locations, the number during the year varied from 149 to 158 (Table I). The difference between active mine location and mine location under inspection has to do with existence of current permit. Since permits expire annually and subsequent completion of mining and reclamation could encompass a period of several years, such operations, even though not under current permit,

*5 Total coal acreage affected in the state

will remain under inspection until all reclamation obligations are completed. So far as change in numbers by mineral product, there was very little significant change during the year. Since there were only 108 active mine locations in 1971, the increase to the present number of 149, no doubt, has some significance.

Figures for permits issued, mines under inspection, and fees collected, etc. are shown in Table I. Data, shown by mineral product, composite totals, and cumulative totals, since the beginning of the OCM law in 1962, are also given in Table I.

For any given year, affected acreage is shown to be routinely smaller than permitted acres. For example, Table I shows 7,001 acres of permits during 1974; whereas, only 6,351 acres were affected. Administration of Illinois law operates in a way that prevents return of unused permit fee. On the other hand, over the years (since 1962), there has been some accumulation of affected acreage for which no permits were purchased. The most common violation was the case of "over-stripping." Although mine operators commonly purchase permit amendments when year-end surveys reveal acreage "over-stripping", an operator who decides to discontinue mining and go out of business cannot be easily forced to purchase an amendment "after the fact." As a result, Table I shows some accumulation of affected acreage slightly larger than permitted acres. In a way, this could be regarded as one measure of law enforcement effectiveness, i. e., 70,109 vs. 70,731 given in Table I respectively as cumulative permit acres and cumulative affected acres.

Since purchase of permit amendments cannot be readily forced upon a terminating operator, current administrative procedure is to prevent "over-stripping" from taking place. Periodic (quarterly) affected acreage surveys are conducted and operators are routinely advised when permit amendments are to be purchased and, to as great a degree as possible, "over-stripping" is prevented from occurring. Any active operator who fails to purchase a needed amendment, of course, would be ordered to close down by court injunction, if he refused, because such action would constitute operating without a permit.

AFFECTED ACREAGE AND RECLAMATION STATUS

Probably no statistical data provides greater reflection of the "fruits" of the reclamation law than that involved with "reclaimed acres" data. Until bonds have been released on a given acreage, all effects of the reclamation law have not yet fully come to play. Tables II and III summarize acreage reclaimed statistics. One should note that Table III pertains only to lands mined under the most re-

cent (SMLC&RA), and Table II combines figures for the preceding two (OCLRA and the SMLRA), and also includes "pre-law" data.

Those who attempt to compare data, in Tables II and III, with similar data in previous annual reports, will discover that table numbers have changed because of elimination of an "old" table no longer in use. Yearly comparison of data still is possible, by relying on table title rather than corresponding table numbers.

By comparing Table II with similar table for the preceding year, it should be obvious that some numbers have "changed." Coal acres affected prior to 1962 is 103,181, based on new SIU survey data. The important change to note is "acres reclaimed" which were "pre-law" acres. This figure is shown to be 92,018 acres. Actually, these acres are not properly classifiable as reclaimed under normal definition of such. Rather, these acres are determined to be non-problem acres (based on SIU survey).

By implication, of course, Table III indicates reclaimed, pre-law acres increased from 57 thousand acres to 92 thousand acres during the past year. In reality, what we now have is an accounting of what "nature" has been doing. Natural revegetation with trees, shrubs, grasses, forbes, etc., has occurred on these "unreclaimed" lands to the extent that they may now be regarded as reclaimed. At the very least, we do know that the reclaimed acres are not "problem" acres (as per SIU survey definition).

There is a very important trend noticeable in Table II, concerning reclamation completion on acres affected under the law (OCM and MLR laws). There was 66 percent of the permitted acres reclaimed at the end of 1972; however, there was 91 percent of these acres reclaimed as of the end of 1974. The large acreage (over 17 thousand acres) reclaimed in the past two years has significantly improved the reclamation status picture.

Special mention is made of the fact that Table II shows no affected acres in the 1974 year. Both affected acres and reclaimed acres done under the SMLC&RA, beginning with permit year 1973, are recorded in Table III. In this way, Table II is really the "book balance" for the pre-law period, OCM, and MLR acts, and Table III does the equivalent for MLC&RA only.

The preceding discussion all pertains to coal surface mining. Comparable statistics for other mineral products also appear in Tables II and III; however, non-coal acreages have not been surveyed for the pre-law period.

Table III presents the picture for what has been affected and what has been reclaimed under the SMLC&RA of 1971. It should be immediately apparent that not much acreage has had reclamation com-

*1 Permit Year (year ending June 30th of the year indicated)
 *2 Reclamation bond released and rebonded for refuse disposal

pleted. In the coal category, for example, only about 450 acres has been released out of over 10 thousand acres affected. Since the law requires one year for completion of grading and two more years for completion of revegetation, there obviously could be and, in fact is a significant proportion of affected acreage which is partially completed (possibly completely graded) which is not reflected in Table III. This reclamation reporting lag-time is perfectly normal and predictable. The first significant reclaimed acreage accumulation (completely reclaimed acreage) probably will be noticeable in 1975. What this actually means is that the general public will not have had a chance to see a great deal of "finished product", under the 1971 reclamation act, until sometime in 1975.

Some overall comment for this chapter could be a response to the question (commonly asked by the general public) - is the law working and is the job being done? Whether or not the law is working cannot be answered honestly because the answer depends upon what one expects the law to achieve. The Land Reclamation Division does not presume to know what the public or given individuals envision or expect of "reclaimed" land to look like or how it should be treated. As for - is the job being done? The answer is an unqualified yes! On the whole, mine operators are doing "as the law requires" - and the statistics show that they have been doing so for as long as the law has so mandated. As already indicated, a 91% completion percentage for the OCM and MLR acres to date, also suggests that, apparently the law enforcement personnel have been doing their jobs.

RECLAMATION PLANS

Under the MLRA, reclamation plans were submitted by operators each December for acreage affected the preceding mining year. It is no longer necessary to discuss such plans nor to mention related statistics because reclamation planning after mining completion is no longer practiced. Under earlier annual reports, the data which was regularly presented in Table III is now eliminated and caution is urged for anyone comparing data by table number for corresponding annual reports.

Since, under the SMLC&RA, reclamation plans are not filed and approved prior to permit issuance, summary of these reclamation plans is arrayed in Appendix Table A. It is to be noted that said reclamation plans are as approved by the state and not necessarily as submitted by mine operators.

Appendix Table A shows that, of acreage to be mined in permit year 1974-1975, there are 5,883 acres permitted (Table I); whereas,

reclamation plans have been approved for 5,560 acres. The reason these two figures are not equal (usually they are) is that one mine transferred ownership during the year and the new owner was required to purchase a new permit for acres already permitted to the previous owner. Reclamation plan acreage for the same "repermitted acres", of course, did not change the total already approved.

The major thrust of Appendix Table A is to reveal the eventual land use to be developed on lands now being surface mined. One can note that the largest category is pasture land with 15% maximum grade being one-half (49.8%) of the total acreage. Over one-third (34.8%) will be pasture land with surface rock limitations and will be graded to approximate original grade. If we combine all lands to be graded to approximate original grade, the total is 42%.

Contrasting comparable figures with those of the preceding year might be of interest. In general, there was a general trend to increase the proportion of those reclamation categories requiring greater amount of grading and rock removal or burial. The 15% maximum slope pasture category dropped from 60% to 50%; whereas, original grade pasture with rock limitations increased from 27% to 35% and original grade pasture increased from 5% to 6-3/4%. Other categories did not make significant change. Acreage to be reclaimed for other land uses include recreation (1.7%) wildlife (.6%), forest (5.6%); and industrial (.8%). (Appendix Table A)

Since 42% of the land to be surface mined in 1975 will be graded to approximate original grade and almost all of this will be tillable because of rock limitations, it should be apparent that high-grade land use potential is assured for these lands. Some readers might wonder about cropland category being only one acre. Realistically, much land graded to approximately original grade is potential cropland. If, in the meantime, pasture land or hayland use actually is applied, long term land use suitability should not be overlooked.

In actual practice, lands being graded for pasture use with 15% maximum slopes do not at all resemble rough, rolling land contours which the 15% maximum slope category would suggest. In fact, on such lands graded thus far, very few slopes approaching 15% can be found and sizeable acreages are tillable topography with significant acreages producing wheat, even though statistical tables will tally such acreages as pasture.

By itself, the wheat land use category is somewhat an ambiguous title. Often times, wheat may be sown as a "nurse crop" for pasture forage establishment. Recent high wheat prices has encouraged some landowners to harvest the wheat crop thus produced and, in some cases, the land has been reworked the following year for another wheat crop.

NON-COMPLIANCE AND BOND FORFEITURES

Operators which failed to perform required land reclamation work have caused the state to go the full limit of the law in numerous instances and bond forfeitures thereby have been requested. In such cases, forfeiture funds are expended by the Land Reclamation Division to perform, by contract labor, that which operators failed to do. A summary of bond forfeiture records is given in Table IV showing companies involved, county, funds involved, etc.

During 1974, earth moving contract work was completed on five mine sites totaling 150 acres. The earth moving contract was administered by the Capital Development Board and the Land Reclamation Division supervised the field work.

It is expected that a contract for grass-legume seeding and tree planting will be awarded by the Capital Development Board in early 1975 so that all forfeiture acreages, for which earth moving work is completed, will be seeded or planted (vegetated as per developed reclamation plan) during the spring of 1975.

Bond forfeiture procedure in Illinois requires two preliminary steps prior to consummation of forfeiture. In general operator's responses to these steps (notices of non-compliance) determine whether or not adequate remedial measures have been instituted to abate a given condition and place the operator in compliance, or if actual forfeiture is to materialize.

Commonly, the first notice of non-compliance brings on the needed corrective measures which obviate further state action.

Following is a summary table which indicates the number of non-compliance notices this year, by reclamation law category, and mineral product:

SURFACE-MINED LAND RECLAMATION ACT

90-day letters		30-day letters	
Product	No. of Notices	Product	No. of Notices
Coal	5	Coal	3
Limestone	4	Limestone	2
Shale	2		
Sand & Gravel	1		
Refuse			
Coal	3		
Shale	1		
Total	16		

SURFACE-MINED LAND CONSERVATION AND RECLAMATION ACT

45-day letters		30-day letters	
Product	No. of Notices	Product	No. of Notices
Coal	6	Coal	1
Limestone	2		
Sand & Gravel	1	Total	1
Refuse			
Coal	1		
Total	10		

One should note from the foregoing table that the first notice of non-compliance under the SMLC&RA has been changed from 90-days to 45-days. This is the number of days, following receipt of notice, which an operator has available to instigate corrective measures. As the table shows, corrective measures commonly came about and it became generally unnecessary to send 30-day notices in most cases.

This year, 1974, was the first deadline (July 1, 1974) by which time lands affected under the SMLC&RA required grading completion. This was the first time that Illinois mine operators had to meet a grading deadline and nine operators failed to comply. Also different is the fact that the exact same acres affected in permit year 1973 had to be graded by July 1, 1974. These, and other new criteria, collectively add to the burdens of mine operators in a way that requires increased alertness and awareness on their part. It should be recognized that, at times, non-compliance reflects an "information gap", rather than a "willingness gap."

Table IV shows the list of companies that have experienced forfeiture to date and other details about such forfeitures. The list of companies has been enlarged by two during the year (Ajax Coal Company and New Burnside Coal Company). There are a total of seventeen companies that have experienced bond forfeiture to date. All but two companies involved coal mining.

Technical Violations: An operator in Johnson County had moved his mining operation one-fourth mile and technically was operating without a permit for failure to secure a permit transfer. The operator voluntarily ceased operating, for about a month, until permit transfer was effectuated.

A Jackson County operator was found to have exhausted permitted acreage and, technically, was mining without a permit. When

Williamson	Wenzel Bros.	5.00		1,000.00		1,027.78
TOTALS		160.98	289.40	54,812.50	25,680.00	57,620.68

the operator was advised of this status, immediate voluntary shut-down, until permit amendment was secured, made it unnecessary to request a court injunction.

A Pope County operation was found removing coal from overburden less than ten feet deep (conditions not requiring permit) and had uncovered coal on some area in excess of ten feet deep (conditions requiring a permit). Upon being advised of the violation, the operator voluntarily ceased mining until a permit was secured.

A Williamson County coal mine was found to have exhausted permitted acres and was advised to apply for an amendment to enlarge permitted acres. Failure to promptly comply forced the Land Reclamation Division to petition for a court injunction to close down the mine. Upon being notified to appear for the injunction hearing, the operator promptly applied for the needed amendment and the injunction was obviated.

Permit Rejection: A Williamson County operator was served with a notice of threatening forfeiture for failure to reclaim at a time when a new permit also was being sought. The operator was advised that new permit issuance would be reconsidered after non-compliance status was abated. Subsequently, this mine operation ceased operating and was sold to a new owner and the new owner has assumed responsibility to reclaim acres affected by the previous operator.

Involuntary Judicial Involvement: The 1973 Annual Report explains some legal controversy where the authority of state vs. county authority, relating to land reclamation standards, came into question. Initiating from a lawsuit brought by the Knox County Board Reclamation Committee, in 1974, the Illinois Supreme Court issued a decision, wherein, it was ruled that “—counties have no authority to regulate reclamation procedures.” At this writing, the Land Reclamation Division is not aware of any further legal controversy underway, other than an appeal filed in the Knox County case.

AFFECTED ACREAGE BY COUNTY - COAL

Table V lists all counties in Illinois with acreage disturbed by coal surface mining. One should note there is some minor yet important change in data base. Previous annual reports have shown affected acreage compiled by the state for areas affected during operating period of surface mining laws (since 1962). The state had never surveyed “pre-law” affected areas; whereas, the coal industry had done so. As a result, the state has been using coal industry figures and adding annual state-compiled data to arrive at current total affected area figures.

TABLE V
COAL - AFFECTED ACREAGES - PRE-LAW - JUNE 30, 1974

*1 Data provided by Cooperative Wildlife Laboratory, SIU

*2 .488% total acreage affected by surface mined lands in Illinois

Studies, funded by the Land Reclamation Division, performed by Southern Illinois University, made new data available this year. By comparing the 1973 and 1974 pre-law totals, one can note that, henceforth, correct pre-law affected acres will be regarded as 103,181 rather than 107,001, as previously reported. Previous compilation of state figures annually gave a total affected area of 58,988 acres from 1962 through 1971. Since the SIU survey shows that such acreage actually is 60,462 (1,474 acres larger), the new figure will henceforth be used.

Hopefully, readers of this report will understand that minor differences in survey figures herein reported represent fair attempts to quantify illusive parameters. The 3,820 acre difference between the industry pre-law figure and the SIU survey is explainable and a number of factors can be cited which affect such. Significance of this minor difference; however, suggests that general interest does not require such detail as the needed explanation would demand.

Since the state has been compiling annual acreage affected and the SIU figure shows the 1962 through 1971 figures actually are 1,474 acres larger than heretofore tallied, this more precisely determined figure, perhaps, deserves explanation as to the difference. Annual acreage affected is not something fixed. Even after mining is completed and area is recorded, changes can and do occur. Probably the greatest single cause of acreage change is that caused by grading along an affected area boundary. High spoil piles that are "leveled down", in effect, are spread out over larger acreage (affecting more land). Officially, affected acreage has already been recorded and ledger entries, of course, cannot be changed perpetually.

A true picture of actual surface mining acreage affected can only be maintained by periodic resurvey and updating existing data, perhaps, once every ten years or so, as is being done now and herein reported.

Table V shows that active surface coal mining occurred in 15 counties this year, which is one county less than in 1973. Pope County had no coal surface mining in 1974. Total acreage affected in the state has now risen to 181,177. There are six counties (Fulton, Knox, Perry, St. Clair, Saline, and Williamson) listed in the "five figures" of total acreage affected by coal surface mining. Saline county is listed in this group this year for the first time, having just gone over the ten thousand acre mark.

Those interested in the acreages for individual counties will note that some change has occurred and new data, using SIU base data, should be regarded as more precise, for reasons previously explained. Counties which have experienced no surface mining for the last several years may have either gained or lost acreage, if one

compares Table V with the same table in previous year's annual reports. Two counties which experienced the greatest change in "new" survey acreage are Fulton and St. Clair. Both county affected acreages are smaller than previously thought, and one can look at the pre-law figures (present data contrasted with 1973 report) to account for the difference.

Surface coal mining acreage in the state, during 1974, involved 5,599 acres. This is a decrease from the 5,741 acres reported for 1973. In this particular year (1974) a decrease of coal mining acreage would have been generally predictable based on the labor contract work stoppage lasting for about two months. Conceivably, without the work stoppage, there may have been no acreage decrease.

General information about energy shortage and the apparent high demand for coal along with some new signs of increased coal production effort, suggest that the trend of decreased annual surface coal mining acreage may be at an end. Opposite influence, of course, can be expected from the fact that shallower coals are being exhausted and future surface mining would be expected to become progressively deeper and it will require more "yardage" to be removed per acre.

REFUSE DISPOSAL PERMITS

Table VI gives a summary of refuse disposal permits tabulated according to the law under which the permits were issued. Since these permits continue in effect for the duration of active use, only minor changes generally occur in any given year. The number of permits will decrease, of course, when a given site is deactivated and reclaimed, with subsequent bond release.

The number of permits increased from 25 gob permits to 33 and from 23 slurry permits to 27 under the SMLC&RA.

One bond release was executed this year, for 22.13 acres, under the SMLRA.

TABLE VI**SUMMARY OF REFUSE DISPOSAL PERMITS
BY RECLAMATION ACT****Surface-Mined Land Reclamation Act**

GOB		SLURRY	
26 permits		21 permits	
Coal—	337.14 acres	Coal	759.21 acres
Released—	22.13 acres	Silica Sand	15.00 acres
		Shale & Clay	2.00 acres
		Limestone	1.00 acre
		Totals	777.21 acres

Surface-Mined Land Conservation & Reclamation Act

GOB		SLURRY	
33 permits		27 permits	
Coal—	570.59 acres	Coal	534.23 acres
		Limestone	6.50 acres
		Shale & Clay	19.80 acres
		Silica Sand	11.70 acres
		Sand & Gravel	6.00 acres
		Totals	578.23 acres

It may be of interest to note that a tally of all permits combined shows 907.73 acres of gob and 1,355.44 acres of slurry area. This is significant acreage of potential "problem" sites if the present permit system were not in effect. The reclamation law prescribes measures for reclamation of these areas, and possibly more important, influences refuse disposal practices in a way that prevents or minimizes potentially serious pollution problems.

STATE SPONSORED RESEARCH

The preceding chapter indicates that refuse disposal from surface mines is being regulated and so the means are available to deal with environmental consequences thereof. However, refuse disposal sites created "pre-regulation" still exist and pollution problems from such sites persist.

There are also surface mined spoil areas on old mine sites some of which consist of toxic spoils which are of such character that surface runoff therefrom causes problems similar to that from refuse disposal sites. In order to help deal with such areas, the Land Reclamation Division sponsored research by the SIU Cooperative Wildlife Research Laboratory to survey and quantify "Problem Sites - Surface Mined Lands in Illinois." Both refuse disposal and surface mining sites are included in the study. This study has been completed and a voluminous publication is now available. Interested parties may obtain copies from the Land Reclamation Division. Some federal agency people have expressed pleasure at seeing this publication and have indicated it could serve as a useful model for a nationwide similar survey.

Coal refuse revegetation research, initiated by the Land Reclamation Division in 1971, has been continued and larger size plots were seeded and fertilized in 1974. This modest scale research continues to show that it may be possible to vegetate gob disposal sites without first covering with soil. Adequate liming and fertilizing has given impressive results. Some plots have supported vegetation through four growing seasons. Some unusually impressive rye grain was grown, in 1974, on one-half acre to one-acre plot sizes; although, the rye grain is intended only as a nurse crop for perennial vegetation.

RECLAMATION PLANS

A reclamation plan means different things to different people. Since an approved reclamation plan is pre-requisite to permit issuance, it is important for one to recognize that a mine operator devel-

ops a post mining land reclamation plan at the time of permit application. All steps and measures involved during-mining or after-mining activity which are relevant to land reclamation are considered germane to the reclamation plan, especially if mining procedure *per se*, in a given situation, restricts reclamation plan achievability.

Attention is suggested to note that Appendix Table A summarizes "approved" plans. The correct implication, of course, is that some plans were approved as submitted by mine operators and some were not. A comparison of Appendix Tables A and B reflects the amount of reclamation plan modification which occurred this year.

Approved plans call for over 91% of the land affected this coming year to be reclaimed initially to pasture. Special mention is made to note that there are three categories of pasture, under present rules. About 50% of the total acreage will be graded with land topography being 15% maximum slope steepness. About 42% of the land will be graded to approximate original topography. Over one-third (34.8%), in addition to being graded to approximate original topography, will have no rocks (as per Rule 1104 texture criteria).

Contrasting this year's data with that of the preceding year, the proportion of pasture land to be created is about the same; however, the proportion of land to be graded to approximate original grade has increased from 32.3% (in 1973) to 41.6% this year.

It should be obvious that, in the long term view, a portion of the lands graded to approximately original topography will be suitable for almost any land use the owner chooses, following original establishment of a forage crop. In fact, forage production is an excellent "pioneer crop" for conditioning soil for other uses.

Other land uses to which reclaimed lands are to be devoted are listed in Appendix Table A. By comparing Appendix Tables A and D, one can discover the land use change implied relating pre-mining land use to post-mining land use. Appendix Table C gives the same type of data as just described except that the latter pertains to lands for which refuse disposal permits were issued.

STATE MODIFICATION OF PROPOSED RECLAMATION PLANS

As indicated in Appendix Table A, reclamation plans were approved for 5,560 acres this year. Of that number of acres, the Land Reclamation Division found it necessary to modify plans on 1,676 acres (Appendix Table B). This same table shows that twenty-five proposed reclamation plans were modified to some degree.

A year ago, there were 24 proposed reclamation plans modified, involving a total of 1,353 acres. Because of this number of plan

modifications, a reclamation plan guideline was developed and distributed to permit applicants, in 1974. It was interesting to note that some applicants followed the guidelines very closely, and others ignored it completely, apparently.

The preceding chapter mentions complexity of reclamation plans and attempts to clarify the fact that, in reality, seeding and planting are merely the last stages of the mining process. Because the Land Reclamation Division is obliged to impose conservation and reclamation provisions on mine operations, at times, this duty requires invasion of the mining production process. In general, the information in Appendix Table B summarizes predominant categories in which mining or reclamation methodology has been mandated by way of Departmental addenda (modification) to proposed plans. Though seven categories were chosen for grouping summary data, the reader is advised that these are general categories because some peculiar, individualized addenda defy meaningful summarization, as always is the case when "labels" are used.

Appendix Table B reveals that the Land Reclamation Division does exercise considerable influence on the content of approved reclamation plans—albeit in the form of acceptable proposed plans, or, plans modified prior to approval.

LAND USE PATTERNS PRIOR TO SURFACE MINING

Appendix Table D summarizes the land use pattern, on mining permit lands, prior to mining. A comparison with the same table for the preceding year shows that, for this year, a greater proportion of forest land is to be mined and less pasture land with the proportion of crop land remaining about the same. As indicated, these pattern's may change from year to year and meaningful trends should best originate from data for a period of years rather than assume that any given year is typical.

By contrasting Appendix Tables A and D, one can determine the "before and after" effect of surface mining on land use pattern. Although the pre-mining pasture land proportion of 28% will change to 91%, some distinction may be made of the different categories of pasture land. There will be 50% of the mined acreage reclaimed initially to pasture (maximum grade 15%); whereas, 42% will be reclaimed pasture land with approximate original grade. Conceivably, land restored to original grade will not necessarily remain permanent as pasture since use for crop production would be possible on a portion of these lands.

Both forest and crop land acreage decreases are indicated and net gain in pasture acreage is the corresponding implication.

Appendix Table E gives similar statistical summary for lands to be affected by refuse disposal. In this table, one should note that natural land areas are summarized separately from previously mined lands. Over two-thirds of the total acreage to be used for refuse disposal is land previously affected by surface mining.

Some significant benefit results from use of previously affected lands for refuse disposal. The most obvious benefit is that a corresponding area of "natural" land thereby need not be affected. The other (not so obvious) benefit is that some previously affected lands are "up-graded" through the process of reclaiming refuse areas under criteria now required for such. In some cases, especially with gob disposal sites, some significant "problem" sites are actually corrected and the lands made productive through proper, post-disposal land reclamation measures.

ASSESSED VALUATION AND OWNERSHIP OF LANDS BEING SURFACE MINED

Appendix Table F summarizes lands to be surface mined by category of land ownership and assessed valuation, for each mineral product being surface mined. One can discern some trends by observing the way figures are arrayed on Appendix Table F, because the valuations are summarized by \$50 groups.

It is apparent that the bulk of the acreage being affected is for coal mining. In general, coal surface mining tends to involve lands of relatively lower value because coal seams are thin and mineral yield per acre is very low compared with other minerals, such as limestone or sand and gravel. Only about 7% of the coal land is assessed at \$300 per acre or higher. Over 43% of the coal land is assessed at less than \$100 per acre. Accordingly, about one-half is assessed at rates between \$100 per acre and \$299 per acre.

Over three-fourths (76.5%) of the coal mining will be done on corporate ownership. Percentage calculations for assessed valuation by ownership shows that some peculiar patterns exist. Almost 45% of the corporate ownership is assessed at below \$100 per acre contrasted with 40% for individual ownership. Eighty percent of individual ownership is assessed at below \$200 per acre contrasted with 70% for corporate ownership. On the other end of the scale, more than nine percent of individual ownership is assessed at over \$400 per acre; whereas, no corporate ownership is assessed over \$349 per acre category. There does not seem to be any specific trend of assessed valuation between ownership category which holds true "across the board." Varying inferences can be drawn at different points along the scale of Appendix Table F.

A comparison with Appendix Table F in the preceding year's annual report reveals some significant contrasting differences. Company ownerships were assessed noticeably higher than individual ownerships. The point herein revealed is that a given year does not necessarily represent a typical year. By chance alone, figures for any specific year can be sharply different from that of an average year. After statistics of this type (Appendix Table F) have been compiled for a few more years, perhaps some valid inferences can be made which, at present require some speculation.

SURETY BONDS

Any new permit issued automatically means that the Land Reclamation Division received and is holding a surety bond for the acreage permitted for surface mining. Under the OCLRA and SMLRA rules, blanket bonds, covering more than one mine was common. Also, a given bond was not necessarily attached to a given land parcel.

Under present (SMLC&RA) rules, blanket bonds are not permitted and each area mapped as affected in a given permit year has a separate bond identified with that area. Additionally, during 1974, the bond rate was increased so that, essentially, all permits are now bonded at the maximum (\$1000 per acre) rate.

Actual value of bonds held is listed in Appendix Table G, to be noted, of course, is that these figures are only for one permit year.

Although, in general, the term surety bond accurately describes the instruments involved, it is not correct to assume other types of bonds do not exist. Some smaller operators furnish certificates of deposit made payable to the Department of Mines and Minerals. Such certificates are deposited in the State Treasury for safekeeping and the Land Reclamation Division holds a receipt from the Treasury.

Refuse permits require separate surety bonds and these bonds are held for as long as the site is active and until reclaimed. Figures for these bonds are summarized in Appendix Table G. To be noted, is that this table involves bonds only for refuse permits issued during 1974.

SURFACE MINING TECHNIQUE

Surface mining technique employed can be very important to the extent that certain reclamation measures may be limited or excluded on the basis of equipment capability. For example, a dragline has the ability to selectively dig the upper, unconsolidated material and,

in proper sequence, place such material as the top layer of a spoil ridge. A mining wheel does the same thing. On the other hand, a shovel seldom selectively handles material because of disadvantaged position, reach, and restricted excavating mode.

Appendix Table H summarizes mining techniques to be employed under permits issued in 1974. It is probably very fortunate that over 70% of the acreage to be mined will be done either by dragline and shovel. Only 5.8% of the total acreage is to be excavated by shovel. The wheel and shovel combination will affect 14.4% of the total and 7.1% will be affected by dozer and scraper combination.

Only a very small proportion of coal acreage is to be excavated by dozer and scraper; whereas, this tends to be the predominant technique for other minerals. Because the overburden to mineral ratio is low for non-coal minerals, larger and more efficient equipment, such as that used for coal mining, could not be justified because the equipment could not be employed continuously. Larger equipment is probably too costly if part-time idleness is required by existing work load.

Illinois is the only state where mining wheels are known to operate on a regular basis. Use of mining wheels is possible only where there is enough depth of unconsolidated material to justify their installation.

A comparison of this same (Appendix Table H) with the same table in the preceding year's annual report reveals significant changes in three categories. The dragline and shovel combination has gained greatly; whereas, the shovel as well as the wheel and shovel combination have correspondingly decreased. No explanation is immediately apparent to account for these noteworthy changes.

OVERBURDEN DEPTH

Surface mining overburden average depth categories are listed in Appendix Table I. For minerals other than coal, mineral seam thickness tends to be very high and the overburden to mineral thickness ratio has only limited significance. Thinness of coal seams requires continuous overburden removal to keep pace with coal production. As a result, overburden depth is extremely important in coal mining.

Before explaining some statistics involving average overburden depths over the past three years, the reader is cautioned to recognize that the use of statistical averages requires some allowance be made for actual meaning of average. Operators are asked to supply data for average overburden depth and they do supply the numbers used.

However, it is not purported that the figures are precise, surveyed data; rather, they are estimates. As a result, for any given year, only limited inference is possible. Realistically, over a period of years, one may expect that average figures should reflect meaningful trends.

By comparing data for coal overburden average depth in Appendix Table 1, with the comparable table in the two preceding annual reports, only one depth category shows a straight line trend. The three year trend shows that acreage in the 51 to 75 foot depth category has increased from 43% to 57% to 60% respectively. In the 76 to 100 foot depth category, the trend suggested is, beginning in 1972, 12% to 27% to 18% in 1974 and, therefore, no real trend is apparent yet. There were 156 acres with average overburden depth of 25 feet or less in 1972; 7 acres in 1973; and only 24 acres in 1974.

MISCELLANEOUS ACTIVITIES

The Land Reclamation Division found itself involved with numerous instances, during the year, where special events demanded time and effort on the part of our staff. Handling correspondence from citizens and citizen groups is too common to list or even summarize.

Some matters require special, individualized attention. Our staff participated in numerous field tours where people requested assistance to personally visit surface mining and land reclamation projects. A partial listing of these tour groups would include: county boards, other governmental agency groups, citizen groups, school groups, news media people, and a group of visiting scientists from England.

The Division, being a public agency, cannot take visitors to private property (mine properties) without the permission and cooperation of mine operators. Since we are actually "guests" of the landowner or mine operator, our role generally is, more or less a public education effort and, of course, a mine operator too is a part of the public. Willingness of mine operators to maintain the excellent cooperation existing surely is a benefit to all interested parties.

The Division supports some research at the University of Illinois, Department of Agronomy. In 1974, a scientific paper was published on the basis of this research. Subject matter of this paper dealt with upward diffusion of acid on soil-manteled gob disposal sites.

On the federal level, congressional efforts are continuing to bring about a federal surface mining reclamation act for coal surface mining. From time to time, various federal offices send out voluminous

amounts of information concerning proposed federal regulations; some for our information—some for our review and comments.

UNUSUAL LAND RECLAMATION EVENTS

Hulcher Quarry at Nokomis, Illinois has combined a desire to eliminate a deep limestone quarry "hole" with a nearby power company fly ash disposal problem. The result is less land now affected by fly ash disposal and level, restored land being developed at the quarry which combines to create a double benefit, in terms of land use.

Amax Delta Mine at Paulton, Illinois has been growing wheat as a cover crop and over-sowing with grass and legumes to develop hay or pasture land. In 1974, the wheat yield apparently was too good to waste so it was combined on a couple hundred acres or more. Upon release of surety bonds, the area has been "reworked" in the fall of 1974 and a new crop of wheat is being grown. Eventuation of forage production, at this time, is not known. The price of wheat may be a factor.

Some derelict surface mined land near Marion, Illinois has experienced "land salvation" in two different instances. One site has been rehabilitated into "desirable" real estate by way of sanitary land fill and subsequent land reclamation. More of the same is continuing. In the other instance, a private landowner has leveled about 20 acres of rough, toxic, only partially vegetated, pre-law spoil. In this instance, land reclamation may be the beneficiary of fortunate real estate location.

Jader Fuel Company was awarded a meritorious conservation certificate by the Illinois Chapter of the Soil Conservation Society of America. The award was in recognition of outstanding land reclamation work at the company's coal mine in Saline County.

No attempt has been made to search out all or even most of the unusual land reclamation events in Illinois during the year. To have done so, no doubt, would have resulted in the recitation of a fair number of cases.

APPENDIX

NOTE: Appendix tables concerning surface mining permit acreage involve data about permits issued between July 1, 1974 through December 31, 1974.

Appendix tables concerning refuse disposal permit acreage involve data about acreage permitted between January 1, 1974 through December 31, 1974.

All appendix tables pertain to the Surface-Mined Land Conservation and Reclamation Act.

TABLE A

DIVISION OF OIL AND GAS

The Division of Oil and Gas of the Department of Mines and Minerals is required to enforce the provisions of "An Act in Relation to Oil, Gas, Coal and Other Surface and Underground Resources," and the Rules and Regulations formulated pursuant to the provisions of the Act.

It is the duty of the Division to see that oil wells are properly spaced; to control the drilling and plugging of oil wells and wells drilled in connection therewith; to see that necessary precautions are observed to protect the workable coal seams through which wells are drilled and to prevent pollution of land and fresh water supplies resulting from oil field operations.

Permits must be obtained from the Division of Oil and Gas before wells are drilled for oil, gas, watersupply, water input, gas input, air input, salt water disposal, and structure test. In 1974, 1,408 such permits were issued. The Law requires that for each well drilled or acquired, the operator must furnish the Division with bond coverage to guarantee the eventual plugging of the well with the satisfactory restoration of the well site. The State oil well inspectors are in attendance to supervise the plugging of all abandoned drill holes, which in 1974 numbered 1,635.

The Division furnishes copies of permits and plugging affidavits to the State Geological Survey, and is charged with the responsibility to seeing that well logs and cuttings are sent to the Survey. The Division also receives and records completion data on wells drilled.

The Rules and Regulations of the Division provide for the calling of public hearings, upon written request of any interested person, for the purpose of taking action with regard to any matter within the jurisdiction of the Department. All such hearings are made of record in the Division and are open to public inspection.

The Oil and Gas Board consists of four members and the Director of the Department, and is subject to call by the Mining Board for advice and consultation on matters pertaining to the oil and gas industry.

SUMMARY BY COUNTIES OF THE NUMBER OF PERMITS ISSUED,
OIL WELLS COMPLETED AND WELLS PLUGGED DURING 1974—(Concluded)

County	Total oil permits issued in 1974	Oil wells completed in 1974	Plugged wells completed in 1974	Number of Other Fee Permits Issued						Number of No Fee Permits Issued	
				Salt water disposal	Water input	Observation well	Gas input	Air input	Gas storage	Structure test	Water supply

STATE OF ILLINOIS
DEPARTMENT OF MINES AND MINERALS
SPRINGFIELD, ILLINOIS

In the matter of a petition of
Ottis Hostmeyer under Rule IV (3)

HEARING ORDER No. 221

Ottis Hostmeyer filed a petition with the Department of Mines and Minerals, Division of Oil and Gas, under authority of Rule IV (3) which reads that:

"Any well drilled in violation of the permit issued therefor shall not be allowed to produce oil and gas, but after notice and hearing by the Mining Board the said well shall be plugged and abandoned unless an exception be granted by the Mining Board."

This cause came on for hearing before the State Mining Board in the State Office Building in Springfield, Illinois, on the 22nd day of January, 1974, at 10:00 A.M., (DST).

Present for the hearing for the State Mining Board was Mr. George R. Lane, Hearing Officer and Petroleum Engineer. Appearances were made by Mr. Lehman D. Krause, Attorney at Law, on behalf of Petitioner Hostmeyer; Mr. Clarence DeMoss, Attorney at Law, on behalf of Elmer Oelze, Jr.; and Mr. James C. Roan, Sr., Attorney at Law, on behalf of W. C. McBride, Inc. Witnesses at the hearing were Mr. Dan E. Jones, Ottis Nelson Hostmeyer, Howard C. Bell and Elmer Oelze.

The Mining Board having considered the oral testimony submitted in said cause by witnesses duly sworn and examined and having examined the exhibits introduced in said cause and having been fully advised in the matter finds:

- (1) That Oil Well Lillie Schroeder #3, drilled pursuant to permit issued October 14, 1955, to W. C. McBride, Inc., is located 330 feet North and 311.1 feet East of the Southwest corner of Fractional Southwest quarter of Section 31, Township 3 North, Range 3 West, Clinton County, Illinois.
- (2) That Oil Well Lillie Schroeder #6, drilled pursuant to permit issued May 29, 1951, to W. C. McBride, Inc., is located 330 feet South and 321.57 feet East of the Northwest corner of the South Half of Fractional Southwest quarter of Section 31, Township 3 North, Range 3 West, Clinton County, Illinois.

- (3) That Petitioner, Ottis Hostmeyer, is the owner of oil and gas rights in and to offset land to the west of said Lillie Schroeder Wells #3 and #6.
- (4) That Elmer Oelze, Jr., is the operator of said Lillie Schroeder Wells #3 and #6 and is the owner of leasehold oil and gas rights therein.
- (5) That notice of the true location of said Lillie Schroeder Wells #3 and #6 has not been brought to the attention of the Department until the filing of the Petition in this matter.
- (6) That the location and the operation of said Lillie Schroeder Wells #3 and #6 have not drained oil or gas from offset land to the West in which Petitioner, Ottis Hostmeyer, is the present owner of oil and gas rights.
- (7) That the location and operation of said Lillie Schroeder Wells #3 and #6 have not created waste or damaged the correlative rights of the Petitioner, Ottis Hostmeyer.
- (8) That any order compelling abandonment of the said Lillie Schroeder Wells #3 and #6 would damage the correlative rights of Respondent, Elmer Oelze, Jr.

IT IS THEREFORE ORDERED that the petition of Ottis Hostmeyer be denied because of failure to show damage to the correlative rights of the Petitioner., and that in order to prevent waste and protect the correlative rights of Respondent, Elmer Oelze, Jr., an exception pursuant to Rule IV (3) is granted as follows:

- (a) The permit for the Lillie Schroeder #3 well issued October 14, 1955, to W. C. McBride, Inc., is amended to permit the well to be located 330 feet North and 311.1 feet East of the Southwest corner of Fractional Southwest Quarter of Section 31, Township 3 North, Range 3 West, Clinton County, Illinois.
- (b) The permit for the Lillie Schroeder #6 well issued May 29, 1951, to W. C. McBride, Inc., is amended to permit the well to be located 330 feet South and 321.57 feet East of the Northwest corner of the South Half of Fractional Southwest Quarter of Section 31, Township 3 North, Range 3 West, Clinton County, Illinois.

DATED at Springfield, Sangamon County, Illinois, this 6th day of March A.D., 1974.

BY ORDER OF THE STATE MINING BOARD:

RUSSELL T. DAWE
Director
